Observed total charge Q = 600 p.e. (±2 %)
Vertex prior
disc $r \leq$ 1 m, default (3229 events)
disc $r \leq$ 0.5 m (919 events)
Posterior density [per MeV]
True energy E of the selected events [MeV]
Observed total charge Q = 160 p.e. (±2 %)
Energy prior
[0.3, 0.8] MeV (4486 events)
cut at $E \geq$ 0.5 MeV, default (2612 events)
edge of the default prior 0.5 MeV
Posterior density [per MeV]
True energy E of the selected events [MeV]
