mean time $\tau_j - t_0$ (needs the true t_0)
first hit time − t_0
straight flight d_j/c_n (0-10 ns)
as recorded: τ_j (contains t_0)
relative time $\tau_j - \bar{\tau}$ (hit sensors)
Fraction of hit sensors per ns
Time since emission [ns]
Mean hit time [ns]
Relative mean time [ns]
