Sensor charge $n_j$ at $E$ = 2 MeV [p.e.]
$10^3$
$10^2$
$10^1$
$10^0$
$10^{-2}$
$10^{-1}$
$10^0$
Distance from the vertex to the sensor centre $d_j$ [m]
16-84 % of the sensors
mean charge
unscattered light at normal incidence,
$YE\,a\,e^{-d/\lambda_a - d/\lambda_s}/(2\pi d)$
half of all photons, $YE/2$
