
lines: $E = Q/(Yf(r_0))$ with the mean collection $f(r_0)$
Q = 400 p.e. ± 1.5 % (1511 events)
Q = 800 p.e. ± 1.5 % (3197 events)
Q = 1200 p.e. ± 1.5 % (4805 events)
True energy E [MeV]
True vertex radius r_0 [m]
Q = 800 p.e. ± 1.5 %
all events with this Q: σ_E = 0.36 MeV (3197 events)
and barycentre radius $|\mathbf{b}| <$ 0.2 m: σ_E = 0.12 MeV (187 events)
and 0.6 $\leq |\mathbf{b}| <$ 0.7 m: σ_E = 0.16 MeV (828 events)
Density [per MeV]
True energy E [MeV]
