median first-hit time
median mean time $\tau_j - t_0$
straight flight d_j/c_n (slope $1/c_n$ = 5 ns/m)
First-hit time − t_0 at E = 2 MeV [ns]
Distance from the vertex to the sensor centre d_j [m]
Sensors per bin
Median of (time − t_0 − d_j/c_n) [ns]
first-hit time
mean time
first hit expected from the jitter alone:
earliest of n_j photons, σ_t = 1 ns (median)
Sensor charge n_j [p.e.]
