Bias, all energies of the prior
one constant (disc average $\bar{f}$ = 0.325): median, 16-84 %
collection $f(r_0)$ at the true radius (needs the vertex)
Energy error $E_{\mathrm{est}}/E - 1$ [%]
True vertex radius r_0 [m]
Resolution at 2 MeV,
half of the 16-84 % range / median
one constant
$f(r_0)$ at the true radius
photon statistics alone, $1/\sqrt{\bar{Q}}$
Relative energy resolution [%]
True vertex radius r_0 [m]
