Light collection vs vertex radius (100 000 events per configuration)
straight + reflection: $c/(1-\rho(1-c)) = 0.675$
straight
absorb (= straight + absorption)
absorb-scatter
full
straight + scattering
straight + reflection
analytic expectation
straight = straight + scattering = photocoverage c = 0.509
grey band under the blue line (absorb): $c\,\langle e^{-s/\lambda_a}\rangle$ over directions
Collected fraction $\langle Q/(YE)\rangle$
Vertex radius r_0 [m]
