Expected vs simulated charge per sensor (50 000 events per vertex and preset; pull = (mean − prediction) / √prediction/N_{events})
1: centre
2: r = 0.5 m
3: r = 0.9 m, facing a sensor
4: r = 0.9 m, facing a gap
5: r = 0.98 m, facing a sensor edge
Mean charge ⟨n_j⟩ [p.e.]
