One theta, four presets: E = 2 MeV at r = 0.67 m (40 photon paths per panel)
straight
Q = 995 p.e., 0 empty sensors
absorb
Q = 584 p.e., 0 empty sensors
absorb-scatter
Q = 561 p.e., 0 empty sensors
full
Q = 636 p.e., 0 empty sensors
Sensor charge [p.e.] (same scale)
100
80
60
40
20
0
path of a detected photon
path of an absorbed photon
Rayleigh scattering
wall reflection
detection on a sensor
absorption in the liquid
absorption on the wall
true vertex
charge barycentre (naive vertex)
