The same theta 200,000 times: E = 2 MeV at (x0, y0) = (0.3, 0.4) m
sensor 5: mean 47.4 p.e.
sensor 13: mean 11.8 p.e.
sensor 21: mean 7.5 p.e.
Poisson, same mean
Fraction of events
Sensor charge n_j [p.e.]
N ~ Poisson(Y E)
N = Y E fixed
Gaussian, variance = mean
Probability density [1/p.e.]
Total charge Q [p.e.]
Poisson: 1
multinomial: $1 - p_j$
Poisson N
fixed N
Variance / mean of n_j
Sensor number j
